USA CHOICE MEATS

OUR VALUES ARE AS RIGHT AS RIGHT
AGED RIGHT FOR FINER FLAVOR...
MORE TENDER, TASTY MEAT IN EVERY
POUR YOUR NEEDS IN OUR EYE-FILLING

You Get MORE TO EAT
in our **PRE-TRIMMED MEAT**

You don't pay for a lot of waste when you buy meat here because excess bone and fat are trimmed off before the roast, steak, or chops are weighed and priced. This means that you get more meat to eat—more of the good-eating part that will cook to juicy tenderness and delicious flavor. Our policy has always been to TRIM OUR MEATS... not our customers!

NURSERYMAN'S VIEWPOINT

By E. F. OBERMAN

Uninformed people may think of soil as dirt but the farmer knows that truly fertile soil is not at all common. One must pay well when purchasing it and give real thought to maintaining it. The farmer finds a definition more to his liking in a dictionary phrase which says, "soil is that portion of the surface of the earth in which plants grow or may grow."

One of nature's miracles in the provision of microscopic forms of life known as bacteria, which perform the function of making many of the soil chemicals more available to crop plants. Truly fertile soil literally swarms with these microscopic organisms, many forms of which, like other living things, require air.

Soil nutrients are convertible and made available by the action of the soil bacteria and this takes place in direct ratio to the soil condition. The condition necessary for "digestion" and "assimilation" of the soil food nutrients depend on soil moisture, soil moisture, soil pH and soil life. The use of Deep-Flo Crystal Gypsite as a soil conditioner improves the capacity of the soil for moisture retention, thereby saving irrigation. It improves soil aeration and allows the micro-organic life more room in which to work. The action of Deep-Flo Crystal Gypsite.

Fractionally all the irrigation water in California is alkaline. In those areas of the state where the irrigation water is pumped, more alkaline is obtained as the water tables go down. Deep-Flo Crystal Gypsite has several uses but the most common use is to combat alkali.

The White, alkali crusts may be rich in calcium but until the alkaline condition is overcome, the plant may die for lack of soluble calcium. Potash is rarely deficient in the soil but is sometimes in an insoluble form which Deep-Flo Crystal Gypsite can free.

Deep-Flo Crystal Gypsite is not a "bug" but it paves the way for permanent soil improvement by giving better water penetration and correcting the alkali condition of the soil. It is recommended for use with any good fertilizer.

BUTTER STATISTICS
About 85 per cent of the nation's butter is produced by 15 states — the leaders being Minnesota, Iowa, Wisconsin in the midwest, and California and Washington in the far west.

Here's Where the New Ideas Come From...

General Motors' new Technical Center—largest of its kind in the world—employs 4,000 engineers, scientists and stylists. These vast resources combine with Pontiac's own ultramodern engineering facilities to bring you America's greatest automobile value—Pontiac, a General Motors Masterpiece.

Watch "Wide, Wide World"—NBC-TV, Sunday, May 20—report on GM's new Technical Center.

...and Here's Where they GO!
